Introduction

REANA-Workflow-Monitor is a component of the REANA reusable and reproducible research data analysis platform. It enables to monitor running computational workflows.

1.1 Features

• monitor running workflows

1.2 Useful links

- documentation
- releases
- · known issues
- source code

For more information about the REANA reusable analysis platform, please see the REANA project home page and the general REANA documentation pages.

Contributing

2.1 Issues

Bug reports, feature requests, and other contributions are welcome. If you find a demonstrable problem that is caused by the REANA code, please:

- 1. Search for already reported problems.
- 2. Check if the issue has been fixed or is still reproducible on the latest *master* branch.
- 3. Create an issue, ideally with a test case.

2.2 Pull requests

If you create a feature branch, you can run the tests to ensure that everything is operating correctly:

\$./run-tests.sh

Each pull request should preserve or increase code coverage.

2.3 Kanban

We are using Kanban technique for keeping track of ongoing tasks. Please see our Kanban board and look for issues that are labelled as "ready for work".

Changes

3.1 Version 0.4.0 (2018-11-06)

- Uses standardised REANA component documentation structure.
- Changes license to MIT.

3.2 Version 0.2.0 (2018-04-19)

• Upgrades Yadage workflow ecosystem versions.

3.3 Version 0.1.0 (2018-01-30)

• Initial public release.

Please beware

Please note that REANA is in an early alpha stage of its development. The developer preview releases are meant for early adopters and testers. Please don't rely on released versions for any production purposes yet.
